BELCANDO® SINGLE PROTEIN

Recipes 26–31

Dear pet lover,
It's great that you want to prepare something tasty for your four-legged companion! Our recipe ideas are addressed primarily to dogs (and their owners) who like raw meat, whether fresh from the butcher, frozen or tinned. You'll certainly find something appropriate here. Our recipes are extremely easy to use, because all you need except for the meat is **BELCANDO® MIX IT**. That way you can be sure that your dog is getting everything he needs for a healthy, natural diet.

Your **BELCANDO®** Team

Which meat should I feed?

The type of meat you feed is entirely up to you and also depends on your dog's preferences. It's best to buy fresh raw meat from your butcher. Beef and poultry are available practically everywhere, and you can frequently get offal on request. Frozen meat prepared specifically for dog food is available from good specialist pet stores. If you have a freezer, you can also stock up on larger quantities in advance. Pure tinned meat is also a practical alternative. Especially in the case of food allergies, when you depend on more unusual ty-

pes of meat and need to ensure that no other ingredients are included, high-quality tinned meat (such as **BELCANDO® SINGLE PROTEIN**) is an excellent option.

What ingredients do I need besides meat?

In order to prepare an optimal, biologically appropriate meal with the proper ingredients, you need more detailed knowledge of nutrition. Wolves did not eat exclusively raw meat: bones, the stomach contents of the prey animals, fruits, grasses and insects were also part of their

natural diet. To cover the nutrient content of these natural food sources for our dogs, a number of different ingredients is required. Dog owners need to know exactly what their dogs' actual nutritional requirements are. Veterinarians often report that dogs who are fed home cooked diets suffer from joint problems particularly frequently. Thus, we recommend **BELCANDO® MIX IT** as a supplement to raw meat – it

has everything dogs need for a healthy diet.

What exactly is BELCANDO® MIX IT?

BELCANDO® MIX IT is a dietary supplement for dogs formulated according to holistic principles by pet lovers. The product has many advantages compared to classic flake supplements, particularly with respect to the ingredients used. In this case, the carbohydrates, which can cause problems for many sensitive dogs, are exclusively from grain-free sources, such as energy-rich amaranth, one of mankind's oldest nutritional staples – it has a significantly higher

Our special ingredients:

Marine zooplankton (Krill)

Amaranth

Chia seeds

nutrient content than grain. **BELCANDO® MIX IT** also contains an unusual number of vital substances that, when combined, can positively influence your dog's well-being. These include chia seeds, a member of the salvia family, which was used by the Aztecs as a basic food and valued as a source of energy and strength. Rich in

1 kg, 3 kg, 10 kg

omega-3 and omega-6 fatty acids, together with marine zooplankton it supports healthy skin and fur. Moreover, zooplankton is extremely nutritious and contains important components that benefit your dog's cartilage and joints.

And it's all combined with lots of healthy vitamins and minerals in the new croquettes from **BELCANDO® MIX IT**.

Ingredients:

Amaranth (20 %); Potato starch; Pea flour; Marine zooplankton, ground (Krill, 10 %); Dicalcium phosphate; Brewers' yeast, dried; Dried beet pulp, desugared; Carob pods, dried; Poultry fat; Vegetable oil (palm, coconut); Grape pips expeller; Chia seeds (2,5 %); Salmon, hydrolysed; Calcium carbonate; Sodium chloride; Potassium chloride; Herbs, dried (total: 0,3 %; Nettle leaves, Gentian root, Centaury, Chamomile, Fennel, Caraway, Mistletoe, Yarrow, Blackberry leaves); Yucca schidigera

What proportions of ingredients should be used

Because all of the ingredients in **BELCANDO® MIX IT** are already combined in the correct proportions, you don't have to worry about it. You only have to add 2 parts of meat and voilà – you have a completely balanced meal for your dog. The recipes also include the quantities required for the various breed sizes.

How much should I feed

Activity level of the dog		Recommended amount to be fed in % of the amounts specified in the sample recipes
Adult	Normal activity level	100 %
Adult	Lots of exercise	140 %
1 – 2 years	Lots of exercise	150 %
Older (> 7 Jahre)	Low activity level	80 %
Older (> 7 Jahre)	Normal activity level	110 %
Pregnancy, 2nd half		150 – 200 %
Nursing mother with 6 puppies		400 – 500 %

The new BELCANDO® Single Protein

Available in four selected meat varieties with **no other supplements**, which can also be used in combination with the food supplement **BELCANDO® MIX IT** for diagnosis (elimination diet) and sustained feeding for food intolerances.
